

# Download File PDF The Cell Cycle Pogil Answer Key

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

**The Cell Cycle**  
What occurs in G<sub>1</sub> and G<sub>2</sub> phases of a cell?

**Why?**  
An organism's chromosomes are made of DNA. DNA is made of two strands. Each strand is made of a sugar-phosphate backbone and a nitrogenous base. The two strands are joined together by hydrogen bonds. The nitrogenous bases are the letters A, T, C, and G. The sequence of these letters is the genetic code. The genetic code is the instructions for making proteins. Proteins are the molecules that do most of the work in a cell. The cell cycle is the process by which a cell makes a copy of itself and its DNA. The cell cycle is important because it allows a cell to grow and divide. The cell cycle is also important because it allows a cell to repair itself. The cell cycle is the process by which a cell makes a copy of itself and its DNA. The cell cycle is important because it allows a cell to grow and divide. The cell cycle is also important because it allows a cell to repair itself.

**Model 1 - The Cell Cycle**

1. What occurs in G<sub>1</sub> and G<sub>2</sub> phases of a cell?  
2. Why is the length of G<sub>1</sub> phase variable?  
3. What occurs in S phase?  
4. What occurs in G<sub>2</sub> phase?  
5. What occurs in M phase?
